MAKING STRIDES
BUILDING UPON EARLY SUCCESS

In Summer 2013, the Centers for Disease Control and Prevention (CDC) released some encouraging statistics: obesity rates among low-income preschoolers, after climbing for decades, began to level off and are now showing small declines in 18 states and the U.S. Virgin Islands.

That is something in which every one of us working to reduce childhood obesity — in both the public and private sectors — should take pride. But it is only just a start. The same report found prevalence increased in three states and remained unchanged in 20 more. According to the CDC, children who are obese or overweight before the age of five are five times more likely than normal-weight children to grow into obese adolescents and adults, placing them at greater risk for high blood pressure, type 2 diabetes and cardiovascular disease. And we all know that for low-income children these statistics are only exacerbated.

It’s been just four years since the Partnership for a Healthier America was created to tackle this urgent national health crisis by transforming the marketplace to offer healthy choices that are more accessible and affordable. In that short time, we have spurred meaningful action from our growing list of partners and collaborators and have begun to see a corresponding shift in consumer expectations. To date, PHA has secured commitments from more than 60 partners, who are collectively creating a marketplace that offers an ever-widening array of healthy choices to American families in the places they work, eat, live and play.

Together, our partners touch more than 45 million Americans, including 5.3 million children in nearly 2,000 cities and every state in the nation, plus Puerto Rico. Commitments from PHA partners have resulted in nearly 70,000 children in daycare eating healthier meals; more than 370 new grocery stores opening in neighborhoods with low access to healthy, affordable food; and more than 3 million kids taking part in increased physical activity.

A year ago, we convened leaders from the private, non-profit, academic, government and philanthropic sectors in Washington, D.C., at our second annual Building a Healthier Future Summit, and were reminded by First Lady Michelle Obama that creating a world in which the healthy choice is the easy choice, “isn’t rocket science. We have everything we need right here and right now to make this happen.”

Thanks to the engagement of many of you, we have numerous successes to celebrate from the past year that prove just that:

Sesame Workshop and the Produce Marketing Association joined PHA by signing a two-year agreement to help promote fresh fruit and vegetable consumption among kids, with the help of Elmo and Rosita.

Over the past year, nearly 400 hospitals joined our Hospital Healthy Food Initiative. Collectively, their commitment could impact more than 40 million patients and half a billion hospital meals annually. These healthier meals include more fruits, vegetables, whole grains and fewer calories for patients and their family members at prices equal to or lower than other menu options.

2013 also saw the launch of Let’s Move! Active Schools, a national collaboration with support from PHA partners Nike Inc., Reebok and Kaiser Permanente. This initiative identifies and trains individual school champions — be they parents, teachers, administrators or community leaders — who are dedicated to integrating more physical activity into the school day.

Recently, we received an encouraging confirmation from the Robert Wood Johnson Foundation showing that the Healthy Weight Commitment Foundation — a group of 16 leading food and beverage companies and PHA’s very first private sector partner — cut 6.4 trillion calories from products sold to American consumers in 2013, exceeding its pledge by more than 400 percent.

PHA takes pride in its commitment to verification, and our annual progress report is designed to show the public how our partners are faring as they tackle this daunting challenge. Our report released last March was the first of its kind, intended to hold up a mirror to the commitments that have been made and to let transparency keep our partners on track.

Of course, nobody said it would be easy. The successes our partners are seeing far outweigh the challenges, as evidenced by their growing number and by the increased consumer demand for healthier options across all industries. And though challenges remain, together, we are moving the nation toward our goal of making the healthy choice the easy choice for American families — one commitment at a time.

JAMES R. GAVIN III, MD, PHD
CHAIRMAN OF THE BOARD, PARTNERSHIP FOR A HEALTHIER AMERICA
A MESSAGE FROM
FIRST LADY MICHELLE OBAMA

Last year, when the Partnership for a Healthier America published its first progress report, I was struck by how much progress we’ve made on behalf of our kids’ health in so little time. A year later, I continue to be impressed not only by the progress we’re making, but by the way PHA has continued to build enthusiasm within the business community. Leading companies are working not only with each other, but with parents, teachers, community leaders and government agencies to make real, lasting change for America’s families. And all of that effort is centered on achieving the ambitious goal we set when we first started Let’s Move! — ending the epidemic of childhood obesity within a generation, so that all of America’s children can grow up healthy and reach their fullest potential.

Because of PHA’s leadership, we are so much closer to that goal now than we were four years ago. You’ve helped our schools, childcare centers and communities serve more nutritious meals and engage kids in more physical activity. You’ve helped hospitals and all kinds of businesses offer healthier foods. You’ve helped to make it easier for busy parents to pick up fresh fruits and vegetables at the grocery store or order a healthy option off the kids’ menu at a restaurant.

So I want to thank you for all of the work you’ve put into this effort. We all should be encouraged that we’re beginning to see reductions in childhood obesity rates — especially among low-income preschoolers — for the first time in years. The fact is, we’re on the right track. But the overall landscape of this issue — one in eight preschool children is diagnosed as obese, including one in five African-American preschoolers and one in six Hispanic children — continues to show us we have so much more work left to do.

We cannot let up until every child growing up in America has the opportunity to grow up healthy and achieve his or her dreams. I know that reaching that goal is possible. Thank you again for all that you’ve done so far and for your commitment to the work that remains.

FIRST LADY MICHELLE OBAMA
HONORARY CHAIR, PARTNERSHIP FOR A HEALTHIER AMERICA
CURRENTLY 1 OUT OF 3 CHILDREN IN THE UNITED STATES IS OVERWEIGHT OR OBESE

1 IN EVERY 4 17-TO-24-YEAR OLDS IS TOO HEAVY FOR MILITARY SERVICE

IF CURRENT TRENDS CONTINUE, BY 2030 ROUGHLY HALF OF ALL AMERICANS WILL BE OBESE

IN THE LAST DECADE, OBESITY RATES IN CHILDREN 2 TO 5 YEARS OLD HAVE DECREASED 43%, FROM 13.9% TO 8.4%

64 PRIVATE SECTOR ORGANIZATIONS HAVE JOINED PHA TO MAKE MEANINGFUL COMMITMENTS TO HELPING END CHILDHOOD OBESITY

PHA PARTNERS HAVE COMMITTED TO:

- CREATING HEALTHIER ENVIRONMENTS IN CHILD CARE SETTINGS FOR MORE THAN 650,000 CHILDREN BY 2015
- BUILDING AND EXPANDING MORE THAN 1,500 GROCERY STORES AND OTHER FOOD RETAIL LOCATIONS, BRINGING MILLIONS OF AMERICANS ACCESS TO HEALTHY, AFFORDABLE FOOD BY 2016
- GETTING MORE THAN 3 MILLION KIDS MOVING MORE

OVER THE NEXT DECADE, MAKING MARKET CHANGES THAT WILL REDUCE CALORIES AND SODIUM AND OFFER HEALTHIER CHOICES FOR BILLIONS OF CUSTOMER VISITS AT HOTELS, RESTAURANTS AND GROCERY STORES AROUND THE COUNTRY
THE PHA FRAMEWORK

American consumers are changing. With an ever-present eye toward their health and the health of their families, they are beginning to seek healthier choices and rewarding those companies that are increasingly providing them. This didn’t happen by accident.

Four years ago, PHA joined other key stakeholders in the fight to end childhood obesity. In recognition of the fact that we simply could not win this war without them, we began engaging corporate America in the battle. We have proudly played the role of catalyst in encouraging and enabling companies to change the way they do business; to forge often-unlikely partnerships with competitors; to eliminate barriers that prevent physical activity and healthy eating; and to provide healthier choices for all families, regardless of where they live or how much they earn.

As our partners have made healthier choices easier, PHA has worked diligently to focus consumers on the healthy option as the default option. Together, we have reduced the price of healthy food choices and worked to market healthier choices in positive ways. We have worked to increase access to physical activity and have asked people to drink more water. We have done it all with one eye on improving health and the other on making sure that kids can still be kids, enjoying indulgences, celebrating victories and having fun — because that’s what being a kid is all about.

As we’ve done this, the private sector has also learned a valuable lesson: These changes aren’t just about good social responsibility — they’re about good business. You can indeed “sell health,” and our partners are proving it. In the pages ahead, we’ll show you how.

A year ago, we issued our first progress report, making public the goals and commitments of our partners and collaborators. When partners sign on with us, they understand that we expect them to keep their promises, and that we’re going to hold them publicly accountable.

PHA partners — whether they’re big, national retailers, regional grocers or consumer brands — agree to have their progress verified by an independent third party. These outside organizations provide us with data that we then publish. Last year we did so in the pages of this report. This year, with the number of committed partners and initiatives growing, we will continue to make that data public, but, in the interest of space, we have compiled it into a database available for online viewing at progresreports.ahhealthieramerica.org. Nothing about this data has changed except for the location – it will continue to show you, in measurable form, how well our partners are advancing toward their commitments and where they may be falling behind.

We encourage you to publicly laud those organizations that are on track or in many cases exceeding their goals, and to stand behind them as consumers. As the First Lady recently said, “When companies do the right thing ... when they give us the healthy options we’ve been asking for, we need to vote with our wallets. That’s how we need to send a clear message that this is what we want for our families. And that’s how we get ever more fresh food in our communities, because when companies see that we’re going to buy this stuff, then they’ll keep making it.”

The pages that follow include an overview of progress for each of our partners in five broad categories: Childcare/Early Childhood, Healthy Food Access, Healthier Choices in the Marketplace, Increasing Physical Activity and Engagement. We have also highlighted new initiatives from organizations that collaborate with us to promote healthier living through special programs, media and social marketing.

As you look through this report, we hope you’ll be as excited as we are about the progress that our partners have made and the momentum they’ve built.
METHODOLOGY

One of PHA’s main goals is, as we often say, to ensure that commitments made are commitments kept. To assess the progress of PHA partner commitments, Altarum Institute, as the primary third-party verifier for commitments made to PHA, works with a team of external verifiers.

Together, the verifiers approach the process with three goals:

1. to design verification methodologies that will yield valid, meaningful data and ensure partner accountability;
2. to establish processes that are feasible to implement in real-world settings without undue data collection and/or reporting burdens on partners; and
3. to strive for consistency in reporting across indicators and data sources, while maintaining a level of flexibility in approaching the verification process such that unique circumstances, abilities and data systems can be accommodated as necessary to document progress.

The general methodology in approaching the verification process is as follows:

• Gather background information on commitments
• Operationalize commitment elements and identify appropriate indicators and data sources
• Work with PHA and its partners to establish or confirm methods for collecting and reporting data
• Develop tools to assist partners in data collection and in the reporting process
• Collect, verify and summarize data

Specific methodologies are developed in tandem with each commitment and include everything from using standardized tools — such as the Wellness Child Care Assessment Tool — to menu and nutrient analyses to GIS software that maps new grocery stores against USDA-designated food desert census tracts or low supermarket access (LSA) areas.

More detailed methodology for each partner is outlined in the online companion to this report, available at progressreports.ahealthieramerica.org.
3.5 MILLION CHILDREN UNDER AGE 5 ARE ENROLLED IN U.S. CHILDCARE CENTERS

673,585 CHILDREN IN CHILDCARE SETTINGS EXPECTED TO BE REACHED WHEN PHA COMMITMENTS ARE FULFILLED IN 2015

CHILDCARE/EARLY CHILDHOOD
CHILDCARE/EARLY CHILDHOOD

Our childcare partners — Bright Horizons Family Solutions, New Horizon Academy and YMCA of the USA — collectively serve more than 750,000 children. Each has promised that their facilities will serve fruits and vegetables with every meal; feed kids in a family-style setting; provide a minimum of 1-2 hours of physical activity each day; and limit screen time activities.

COMPLETED COMMITMENT

In 2013, PHA early childhood partner Kaiser Permanente, one of the nation’s largest healthcare providers, completed its commitment to improve the health of nearly 100,000 babies and mothers in its care. Kaiser achieved the highest standards in breastfeeding in 28 hospitals that offer maternal and child health services.
COMMITMENT

Design and implement programming, policies, and procedures to be used in daily operations so that Bright Horizons child care centers can ensure that all children are being provided the healthiest available food choices and the recommended amount of time dedicated to physical activity. This will include: eliminating sugar-sweetened beverages, increasing consumption of fruits and vegetables at every meal, eliminating fried foods, confirming that no time is being spent in front of televisions or video games and that computer use is limited to educational activity and ensuring children engage in at least 1-2 hours of physical activity daily.

2013 PARTNER STATEMENT

"Bright Horizons centers continue to be energized with the opportunity to guide very young children onto the path of well-being. Ideas for new menus, new opportunities to engage in physical activities inside and out, new vehicles for parent and teacher education help us to continue our efforts to give the children we care for a healthy start in life."
COMMUNITY

Support breastfeeding in Kaiser Permanente hospitals by participating in breastfeeding-friendly programs; implementing a system-wide performance improvement program to achieve the highest possible rates of exclusive breastfeeding; developing a breastfeeding practices implementation guide and including rates of exclusive breastfeeding at discharge as a core quality measure system-wide.

services achieved Baby-Friendly USA designation and/or began participating in TJC’s perinatal bundle. Kaiser Permanente has reported that two hospitals (including one facility acquired in 2011 not included in the PHA commitment) are working towards achieving Baby-Friendly USA designation and participation in the TJC perinatal bundle by 2014. Overall, including data submitted by December 19, 2012 for the past reporting year, 28 Kaiser Permanente hospitals that offer maternal and child health services have achieved Baby-Friendly USA designation and/or were participating in TJC’s perinatal bundle. It has made 96% progress towards meeting its commitment.

| Publicly release a Hospital Systems Breastfeeding Practices implementation guide that includes: | March 2013 | November 2013 | The Improving Hospital Breastfeeding Support: Implementation Toolkit by Kaiser Permanente was publically released in April 2013 as is available at: http://kpcmi.org/wp-content/uploads/2013/03/kaiser- |
- Program measurement strategy
- Performance improvement tool
- Best practices

permanent-breastfeeding-toolkit.pdf The 103-page guide is designed to assist health care organizations and hospitals teams in planning and implementing performance improvement projects designed to promote breastfeeding. The toolkit contains all required elements, including a summary evidence to support breastfeeding, evidence-based practices, program measurement strategy, a performance improvement tool and best practices, as well as 28 sample materials and templates.

2013 PARTNER STATEMENT

"Kaiser Permanente continues to advance industry-leading support for breastfeeding, both within and beyond the commitment with PHA. Breastfeeding is a critical measure on the quality dashboard used by executives - part of what defines quality care delivered at Kaiser Permanente - and an integral part of organizational culture. In 2013, Kaiser Permanente:

- Supported new legislation that requires all hospitals providing perinatal care in California to adopt ‘The Ten Steps to Successful Breastfeeding’ per Baby-Friendly USA or to adopt an evidence-based alternate process. The bill, SB-402, was signed into law by Governor Brown.
- Released the Improving Hospital Breastfeeding Support Implementation Toolkit, which received wide praise after its release, including promotion by the California WIC Association as a best practice guide for fulfillment of SB-402 requirements. In the first 4 months after its publication, the online toolkit had more than 3,300 unique page views from all over the world.
- Continued to enhance breastfeeding support for all Kaiser Permanente mothers and babies through an
inter-regional Community of Practice, promoting continuation of breastfeeding throughout the infant's first year of life. In 2014, all regions will actively collect longitudinal data on breastfeeding, aiming to exceed Healthy People 2020 targets within the next 2 years.
**COMMITMENT**

Design and implement policies and procedures consistent with the Let’s Move! Child Care standards in all New Horizon Academy child care centers operated in Minnesota and Idaho (69 centers serving approximately 7,500 children). This will include eliminating sugar-sweetened beverages; increasing consumption of fruits and vegetables at every meal; eliminating fried foods; reducing time spent in front of television, computers or video games and ensuring children engage in at least 1-2 hours of physical activity daily.

Strategies include (but are not limited to) refrigerated storage for breast milk, private areas for mothers who wish to breastfeed or express milk and training for staff on the proper handling of breast milk.

| At least 85% of centers will serve low-fat or non-fat milk to children ages two and older. | 2013 | 2-year-olds low-fat or skim milk, while 92% of centers serve children aged 3 and over low-fat or skim milk. The lower percentage of compliance with two-year-olds stems from classrooms in which children over and under 2 years old are together.

| At least 85% of centers will serve children no more than one 4-6 ounce serving of 100% juice per day. | May 2013 | November 2013 | Eighty-four percent of centers do not serve juice at all. An additional 14% limit children to no more than one 4-6 ounce serving per day. |
will implement a PHA-approved physical activity and nutrition information education program for children by providing parents and child care providers with information for use with children.

2013 physical activity information materials to parents and providers for use with children. Information is delivered through parent and staff handbooks, electronic and paper newsletters, fliers, informal conversations, formal conferences, family events, health fairs, and menus.

2013 PARTNER STATEMENT

"Consistent with our mission of continuous improvement and building the self-esteem of our children and employees, New Horizon Academy takes pride in our commitment to Partnership for a Healthier America. Our five PHA focus areas include increasing the amount of daily physical activity, eliminating screen time for very young children while limiting screen time for preschoolers, improving the quality of food offered, limiting the offering of beverages other than milk and water, and promoting family friendly breastfeeding practices in our programs. We continue to honor our commitment in each focus area. For example, our 2013 parent surveys indicated a much higher level of satisfaction with meals provided in our centers. In addition, our Farm to Child Care pilot program has been extended to include all Minnesota centers. Also, Dr. David Walsh inspired our employees at our annual conference, where they learned about the importance of human connections (versus screen time) in the development of healthy children. At New Horizon Academy, we recognize that we provide the highest quality curriculum, child assessment practices, and environment for young children, and we fully support the inclusion of healthy practices as an essential component to the development of healthy children."
COMMITMENT

Adopt and implement specific policies and procedures governing healthy eating, physical activity and screen time practices in YMCA of the USA (Y-USA) early childhood and afterschool programs. Develop a Quality Rating and Improvement System to support implementation efforts and track implementation progress.

SEE PRIOR YEARS' PROGRESS >
Fifty percent of Y-USA Member Associations with early childhood or afterschool programs will be in compliance with the Healthy Eating and Physical Activity (HEPA) Standards.

July 2013  April 2014

Results for the fifty percent compliance commitment element will be reported next year. After collecting and reporting baseline data on implementation of the HEPA Standards by Ys with early childhood and afterschool programs, Altarum conducted site visits to 10 Y early childhood programs and 10 Y afterschool programs from May-November 2012 to assess implementation of the HEPA standards. Results from the site visits were:

- Parent Engagement=16 (80%) sites meeting
- Physical Activity Time=16 (80%) sites meeting
- Outdoor Play=16 (80%) sites meeting
- Limit Screen Time=12 (60%) sites meeting
- Fruits and Vegetables=1 (5%) sites meeting
- Family Style Meals=2 (10%) sites meeting
- Fried Foods=8 (40%) sites meeting
- Drinking Water=12 (60%) sites meeting
- Sugar Sweetened Beverages=18 (90%) sites meeting
- Milk=14 (70%) sites meeting
Y-USA will adopt specific policies and procedures for HEPA Standards in early childhood and afterschool programs. Y-USA Member Associations, will, in turn, enter into Memoranda Of Understanding with Y-USA upon either formally adopting the standards or through accepting the standards through the use of materials, services, or grants made available to them by Y-USA.

As of April 2013, the CEOs of 619 (74%) Y Membership Associations with childcare or afterschool programs made a commitment pledge to implement the HEPA Standards.

Y-USA developed a training program for afterschool staff, Building Healthy Programs for Kids: HEPA Standards, which was designed to increase knowledge, skills, and motivation to implement the HEPA Standards in afterschool programs. As of March 11, 2013, there were 39 trainers from across the country
approved to train the course and 815 Y afterschool program staff had completed the training course. The evaluation of the course found a statistically significant increase in the average percent of sites with which trainees work that met the standards for 7 out of 11 of the HEPA Standards. Y-USA created a Healthy Vendor Program to facilitate purchasing agreements with preferred vendors whose products support implementation of the HEPA Standards. A Healthy Vendor Toolkit was developed and disseminated in January 2013 to provide guidance to Ys on working with vendors to ensure that vendors provide high-quality services and products that meet the HEPA Standards. As one example, H.U.M.A.N. Healthy Vending has signed a contract with Y-USA to supply healthy items in Y vending machines. As of April 10, 2013, this vending was available in 116 Y branches located in 27 states.

Utilize the measures of progress included in the November 2015  
April 2016  
Y-USA initiated a Request for Proposals in December 2012 to
QRIS as the basis on which recognition and grant funding will be made available as incentives for implementing policies and procedures.

all Ys with early childhood or afterschool programs that had pledged a commitment to implement the HEPA Standards. In April 2013, 50 Ys received grant funds to help support implementation of the standards through purchase of resources such as refrigeration equipment, play equipment and staff training.

2013 PARTNER STATEMENT

"The Y, one of the nation’s largest nonprofit childcare providers, wants to also be the nation’s healthiest childcare provider. Our aim is to improve the health of hundreds of thousands of children seen daily in the Y. In 2011, YMCA of the USA made a formal commitment to the Partnership for a Healthier America (PHA) and first lady Michelle Obama to adopt early childcare and afterschool program standards for promoting healthy eating and physical activity (HEPA).

"Since that commitment, 83% of all Ys with an early childhood or afterschool program have pledged to implement the new HEPA standards. This represents a 51% increase in commitments over the past year. Many sites have made progress toward compliance: 80% of sites visited by our evaluator met standards for parent engagement, PA time, and outdoor play; 95% of sites visited met standards for juice servings.

"During this second year of implementation Y-USA dedicated resources to bring on a full time Technical Advisor to work directly with local Y staff implementing the standards. New resources were developed to support Ys with implementation. Y-USA secured financial resources that were granted to local Ys to overcome implementation barriers and plans to continue this practice in 2014."
In 2011, 23.5 million Americans lived in low-income areas that lack stores likely to sell affordable & nutritious foods.

3,600,908 individuals residing in a food desert Census tract or limited supermarket access area served by new or renovated grocery stores.

372 new or renovated grocery stores or retail locations have opened in or around food deserts.

Healthy food access
HEALTHY FOOD ACCESS

PHA Healthy Food Access partners work to bring fresh, healthy, affordable food into the communities that need it most. Each of these partners — Brown’s, Calhoun Foods, Klein’s ShopRite, SUPervalu, California Endowment Fresh Works Fund, the Fresh Grocer, Walgreens, and Walmart — has agreed to finance, open or expand stores in communities that lack easy access to fresh food or groceries. Together, these partners served 2.3 million new customers living in such areas in 2013, and a total of 3.6 million new customers since the beginning of their commitments.

“I want to emphasize three things: First, the problem of food deserts is real. Second, it is a problem that is being solved in Philadelphia and can be solved throughout the United States. And finally, the solutions to the problem will have positive impacts on our economy, and more importantly, on the health of our citizens.”

**2013 PARTNER STATEMENT**

“Brown’s Super Stores is excited to report that we will complete our commitment in 2013 with the opening of the ShopRite of Fox Street. The 67,000 square foot full service grocery store is the anchor tenant of the Baker’s Centre project, bringing new businesses and development to the Nicetown community of North Philadelphia. The store offers a wide array of fresh products including halal meat, fresh seafood, and a large produce department. Additionally, the store includes 250 permanent jobs, a health clinic, nutrition services, community space, pharmacy, and a credit union branch. The new ShopRite of Fox Street (August 2013) and expanded ShopRite of Cheltenham (December 2011) projects will complete our commitment to expanding access to healthy, affordable food for Philadelphia residents.”

2013 PARTNER STATEMENT

"Calhoun Foods is happy to announce that we have worked diligently with our wholesaler, Associated Wholesale Grocers (AWG), over the past two years regarding our Partnership for a Healthier America MOU. We have confirmed eight locations that will service the Food Desert areas. These locations will initially serve in the state of Alabama. We have confirmed our first location to be Opelika, Alabama. We will bring the cost-plus concept to this first location, which will be a new format to the Calhoun Enterprises' brand. We are dedicated to bringing affordable foods to distressed areas in the state of Alabama. Starting in the second week of February during Black History Month, we will kick off our 'Let's Move' campaign in our existing stores that will focus on healthy choices. This partnership is with the County Extension Program and we will have several demos around our stores for customers to sample various fruits and vegetables with free health screenings. We have been committed to providing this service to our community for over 20 years."

2013 PARTNER STATEMENT

"The California Freshworks Fund is literally bearing fruit for millions of Californians with limited access to healthy food. The Fund, a public-private partnership loan and grant fund, finances grocery stores and other forms of fresh food retail and distribution to underserved communities throughout the state. New retail operations not only make healthy food available, but also, create new jobs for local residents, transform community environments and build local pride.

"The Fund is capitalized with a combination of debt and grant dollars from a variety of investors. The Freshworks Summit affords investors and funders an opportunity to review program progress, meet retailers and food innovators, brainstorm challenges, modify Fund strategies and tour Freshworks funded projects."

"The Fund has received 300 financing inquiries, solicited 53 funding applications and deployed $36 million in total capital. In addition the Fund has approved 18 grants totaling $417,300. In total, Freshworks has supported 1,362 jobs and developed or renovated 346,153 square feet of healthy food retail space. Freshworks projects have increased access to health food for an estimated 2.2 million low income people in California. Details and updated information on our progress are available at www.freshworks.org."

Provide an annual report, including number of jobs created by the new stores.

November 2016  November 2013

The Fresh Grocer opened one new store near the end of the last performance period (November 2011-November 2012) and job creation data was unavailable at the time of reporting. As such, The Fresh Grocer has reported the number of jobs created for the 2012 store during this performance period. The number of new jobs in FTEs for the new store built in 2012 is 91.1 FTEs.

2013 PARTNER STATEMENT

“The Fresh Grocer supermarkets under Patrick J. Burns' ownership made a commitment to the Partnership for a Healthier America to increase access to healthy, affordable food in communities that are currently underserved by opening five new full service supermarkets over the next five years. The five new Fresh Grocers will sell a variety of fresh fruit, vegetables, fish, meat, dairy, and fresh prepared food products and will open over a period of five years, serving approximately 795,000 people and creating approximately 1,000 jobs.

“The Fresh Grocer's Wellness Plaza location, which opened on November 9, 2012 in New Brunswick, New Jersey, is the first of these five new stores. The opening of the 50,000 square foot Fresh Grocer has created over 300 new jobs in the community and is the neighborhood’s first full service supermarket in over 20 years, bringing fresh food access to nearly 90,000 people.
"In 2013, The Fresh Grocer joined the Wakefern Food Corp. as its 50th cooperative member. Joining the Wakefern team has already proved to be strategically beneficial to our customers, associates and company as a whole. We are excited about how far we have come and look forward to our company’s future growth and development."

2013 PARTNER STATEMENT

"The ShopRite of Liberty Heights is under construction! On May 7, 2013 Klein’s Family Markets, operating ShopRite store in the Baltimore area, hosted a groundbreaking ceremony for the 68,000 square foot store that will be located in the Howard Park community of Baltimore; it is expected to open in the Summer of 2014. The community has been without a grocery store for over a decade and has been a part of this project since the inception. The full service store will include fresh produce, seafood, halal meat, a scratch bakery and prepared food items. Klein’s of Baltimore recently hired a Community Liaison to continue to strengthen our relationships with the surrounding community. Additionally, the store will hire approximately 250 new employees from the local community and will provide an in-store health clinic and community room."

2013 PARTNER STATEMENT

"Providing access to healthy food options is one of the many ways Walgreens helps people get, stay and live well. In 2013 we continued to make progress in our commitment to PHA to expand access to fruits and vegetables in underserved communities. One of our recent store openings as part of this commitment included a collaboration with Johns Hopkins Medicine in East Baltimore - a neighborhood suffering from high rates of chronic disease and limited choices for fresh food. This store is a joint effort to bring new health and wellness programs and an assortment of healthy food options to the surrounding community. This year also brought an expansion of our 'food oasis' locations into new markets including Colorado, Kentucky and New York. We continue to learn a tremendous amount about improving our food oasis program as we enter each new market. We look forward to expanding our efforts to provide access to fruits and vegetables so that the health of Americans does not suffer because of where they live."

**2013 PARTNER STATEMENT**

“When we launched our healthier foods initiative, we realized we had a responsibility to address one of the biggest issues facing American families: how to put healthy, affordable food on the dinner table each night. Our commitment was and continues to be grounded in one truly powerful idea: No family should have to choose between food that is healthier for them and food they can afford.

"By opening stores where customers need them most, Walmart will help build healthier families and stronger communities. We believe every single person, in both rural and urban areas, should have access to an abundant selection of fresh fruits and vegetables at an affordable price. We are proud to say we are well on the path toward meeting our goal of opening 275-300 stores serving food deserts by 2016."
HEALTHIER CHOICES IN THE MARKETPLACE

Some PHA partners (Walmart, Darden Restaurants, Hyatt Hotels and Healthy Weight Commitment Foundation) are reformulating menus and products to ensure that the healthy choice is the easy choice for busy parents and families when shopping or eating out. Others are committed to increasing marketing and advertising of healthy products (Birds Eye); increasing healthy food options in hospitals by meeting standards for nutrition, labeling, marketing and food preparation (PHA Hospital partners and Morrison Health Food Services); and investing in product innovation and a fully integrated marketing program to educate and engage school nutrition directors, moms, chain restaurants and other key stakeholders (the Mushroom Council).

“I know that, regardless of the day, I can find a healthy choice for any mealtime that meets my dietary restrictions and nutritional requirements...I love the brown rice and quinoa choices for carbohydrates...it still puzzles me that healthcare facilities continue to sell items that have been proven to cause the illnesses and diseases that have reached epidemic numbers in our nation.”

MELISSA R. JACKSON
EMT-P, EMTIC, BHSA, CHSP, CHEP Manager, EMS Programs and Emergency Management Henry Ford Macomb Hospitals

WHAT’S IN YOUR FOOD CART?
LESS SUGAR, FAT AND SALT!

Walmart has been reformulating thousands of packaged food items to make the products on its shelves healthier. The result? Fewer than 10 percent of food and beverages sold at Walmart in 2011 contained industrially produced trans fats. Also, sugar content has been cut more than 10 percent, and sodium by 9 percent – the equivalent of removing more than 1.5 million pounds of salt from the market baskets of Walmart customers.
COMMITMENT

Conduct marketing and advertising activities to encourage children to enjoy and consume vegetables, including a consumer marketing campaign that speaks directly to kids in the voices of kids. Dedicate funding to support a text/mobile grocery campaign that markets vegetables to children, offering grocery giveaways and coupons for Birds Eye frozen vegetable products. Invest in product innovation to launch two new kid-developed vegetable products. Conduct a three-year program of free-standing inserts, as well as digital and in-store shopper marketing campaigns tied to the concept, including coupons for Birds Eye frozen vegetable products that meet specific nutrient criteria.

2013 PARTNER STATEMENT

"Birds Eye® is committed to helping kids like vegetables for life, one bite at a time. Through new products, programs and partnerships, Birds Eye is helping families increase veggie consumption and improve childhood nutrition. In 2013, Birds Eye partnered with PHA and Nickelodeon through a digital campaign that reached kids and encouraged them to play with their veggies. An online digital hub allowed kids to play games about veggies and share kid-friendly recipes with mom. Additionally, as part of our commitment to being mom’s ally in the kitchen, the Birds Eye Rewrite the Dinnertime Rules program encouraged families to get kids involved in dinner prep and make it fun. Leveraging the influence of Jennette McCurdy, star of Nickelodeon’s Sam & Cat, Birds Eye used TV, radio, digital and print media to engage kids and moms and get them excited about changing up the rules at dinnertime. In 2014, Birds Eye is looking to strengthen their commitment towards a healthier future generation, inspire and engage with families and collaborate with like-minded organizations on innovative partnerships to make healthy eating and veggies cool to kids. Together, we can help kids like vegetables for life, one bite at a time."
**COMMITMENT**

Enhance restaurant menu options by offering healthier meals and side dishes for children in its four brands that offer kids’ menus (Red Lobster, Olive Garden, LongHorn Steakhouse and Bahama Breeze) and reducing calories and sodium across the core menus of brands in its portfolio at the time of the commitment (Red Lobster, Olive Garden, LongHorn Steakhouse Bahama Breeze, Seasons 52 and The Capital Grille) by 10 percent in 5 years (2016) and 20 percent in 10 years (2021).

updated copy of each child's menu for Red Lobster, Olive Garden, Longhorn Steakhouse and Bahama Breeze and is compliant in all elements of their children’s menu commitment at this time.
will be reported in 2016, consistent with the articulation of Darden's 5 year goal.

2013 PARTNER STATEMENT

"Having met our children's menu commitment, we're excited about the progress we're making toward our calorie and sodium reduction commitments. Adding new items to the menu that are relatively lower in calories is a key part of meeting our commitment, while also meeting our guests' desire for more lighter choices. An example is Olive Garden's new Lighter Italian Fare section of its menu with dishes that are 575 calories or less, including Baked Tilapia with Shrimp and Garlic Rosemary Chicken. And to help meet our sodium reduction commitment, we're working closely with our suppliers to reformulate key ingredients that are used in the preparation of multiple menu items."
COMMITMENT

Sixteen Healthy Weight Commitment Foundation member companies will make choices available that will enable consumers to, in aggregate, reduce annual calorie consumption by 1 trillion calories per year by the end of 2012 and 1.5 trillion calories per year by the end of 2015. This will be achieved through product reformulation (e.g., lower calorie versions of products, revisions of levels of macronutrients such as fats, fatty acids, carbohydrates, sugars and proteins), portfolio shifts (e.g., shifts from higher-calorie to lower-calorie choices) and portion control (e.g., reductions in serving sizes).

**2013 PARTNER STATEMENT**
"On January 9, 2014 the Robert Wood Johnson Foundation announced that the HWCF companies exceeded their goal by over 400%, having reduced 6.4 trillion calories from the marketplace three years ahead of schedule.

"This reduction represents 78 fewer calories per person per day. A study by Claire Wang, MD, ScD, Tracy Orleans, PhD and Steven Gortmaker, PhD that appeared in the May 2012 American Journal of Preventative Medicine (AJPM) concluded that to close the 'energy gap,' reducing calories by 41 per child per day would halt rising obesity levels. Additionally, James O. Hill, PhD stated that reducing an average of 100 calories per adult per day will close the adult energy gap.

"USDA Economic Research Service concluded that calories available in the food supply have declined over time. CDC experts, using NHANES data, have reported declines in energy intake in both adults and children.

"In recent years, America has seen a decline in food supply calories, a decline in calories consumed and a decline in calories sold. This illustrates a story of a nation addressing a major health challenge.

"There is still more work to do. We are committed to working with our partners to help with this critical issue."
**COMMITMENT**

Implement a variety of new standards that will enhance the nutritional profile of children's and general menus offered in restaurants, catering, room services, bars, lounges and pools at full-service, managed/operated Hyatt hotels.

2013 PARTNER STATEMENT

"In spring 2012, Hyatt Hotels Corporation launched its industry-leading, global food and beverage philosophy: 'Food. Thoughtfully Sourced. Carefully Served.' This approach, developed in association with PHA, provides sustainable and responsible food and beverage menus to benefit hotel guests, company associates and community neighbors. The philosophy is driven by in-depth research and customer feedback and is grounded in three pillars: Healthy People (portioned and balanced offerings using natural ingredients), Healthy Planet (sustainable practices improving the long-term health of people and the planet), and Healthy Communities (sourcing from local suppliers and supporting educational programs and events).

"Hyatt also launched its 'For Kids By Kids' menu, which provides more nutritious, fresh and interactive offerings. The menu was tasted, tested and approved by youth, including 11-year-old Haile Thomas, a member of the Alliance for a Healthier Generation. Hyatt also worked with Alice Waters, known for her culinary philosophy that cooking should be based on the finest, freshest seasonal ingredients that are produced sustainably and locally, and developed a 100 percent organic meal offering that includes a salad, chicken entrée and dessert."
COMMITMENT

Dedicate a minimum of $2 million annually for 3 years to bring more vegetables to the plates of American families through mushroom marketing, working with school systems to increase mushroom-based food items served in schools, developing a new category of healthier meat and mushroom products for schools or commercial foodservice and engaging major associations of nutritionists and dieticians to communicate the nutrition benefits of blending mushrooms and meats.

Expo and School Nutrition Association Annual Conferences in 2013, 2014, and 2015. As accepted, presentations during sessions will also be provided by the Mushroom Council.

Nutrition Conference and Expo on October 19-22, 2013 in Houston, TX. They also exhibited at the School Nutrition Association Annual National Conference on July 13-17, 2013 in Kansas City, MO. At both conferences, the Mushroom Council booth included demonstrations on mushroom blendability and provided several items for conference participants to sample as well as informational materials on mushrooms.

2013 PARTNER STATEMENT

“The Mushroom Council is proud of the strides made in the first of our three-year commitment to help bring more vegetables to the plates of American families. We know that getting Americans to eat healthier isn’t just about providing nutritious options, it’s about providing nutritious options that people want to eat every day. No other produce item is as uniquely suited for this challenge. Low in calories and fat, rich in nutrients, flavorful; mushrooms can be added to any meal to create healthy, delicious and satiating versions of the food America loves.

“In 2013, a simple mushroom cooking technique - Blendability: adding finely chopped mushrooms to traditionally meat-based recipes - enabled Americans to serve their families healthier foods.

“Blendability is at the cornerstone of everything we do and the response has been enthusiastic: headlines and how-to’s in the places consumers turn to for recipe and wellness inspirations, more health practitioners recommending mushrooms; chefs creating recipes for restaurants and foodservice operations; and innovative blend products -burgers, meatballs, tacos- debuting in schools through several pilot programs.
"The 'Trend to Blend' took off this year and helped make meals, menus and families healthier along the way. We'll share complete first-year updates in spring, 2014."
COMMITMENT

Work with suppliers to reformulate certain everyday packaged food items by reducing sodium 25% and added sugars 10%, removing all remaining industrially produced trans fats, making sure healthier choices are affordable to customers and developing criteria for a simple front-of-package seal to help customers identify healthier food options.

**2013 Partner Statement**

“We are pleased with our progress so far in making food healthier, and healthier food more affordable. We worked with our suppliers to make substantial reductions to the sodium and added sugars in key products, and have saved our customers more than $2.3 billion in fresh fruits and vegetables in just the first two years of our commitment. Our Great For You labeling is helping customers quickly and easily identify healthier foods in our stores. We have opened more than 86 stores serving food deserts, and we plan to open more than 200 additional locations by 2016. And finally, through the Walmart Foundation, we’ve awarded more than $26 million in grants to support nutrition education programs. We are excited about what we’ve been able to achieve so far and look forward to continuing our work so that every American family has access to healthier, affordable food.”
COMMITMENT

To move healthcare institutions toward delivering nutritious options to meet the needs of children and families they serve, committing hospitals will engage in nine domains of activities:

1. Fruit and Vegetable Procurement-increasing purchasing of fruits and vegetables,
2. Food Marketing-displaying only health-promoting foods in advertising and pictorials,
3. Healthy Checkout-offering only healthier food options near cash register stations,
4. Child Wellness Meals-offering to patients and guests a child wellness meal that meets specific nutrient, food and affordability profiles,
5. Adult Wellness Meals-offering to patients, guests and staff adult wellness meals that meet specific nutrient, food and affordability profiles,
6. Overall Cafeteria/Menu Offerings-increasing the percentage of healthy entrees and side dishes,
7. Nutrition Labeling-labeling all foods with calories per serving,
8. Healthy Beverage Procurement-increasing purchase of healthier beverages and
9. Food Preparation-removing all fryers and deep fat fried products.

**2013 PARTNER STATEMENT**

“Ann & Robert H. Lurie Children’s Hospital of Chicago is the largest pediatric provider in the Chicago region with a 130-year legacy of excellence. Hospital leaders made the decision to sign onto PHA in order to ensure that the food choices we make available to patients and staff are consistent with the health education our clinicians are providing.

“By leveraging Morrison Healthcare’s robust Mindful Choices wellness platform and aligning with PHA, Lurie Children’s began offering daily wellness meals in the café beginning January 2014. In addition, the Kid’s Wellness Combo, which includes a 20 oz. Lurie Children’s logo bottled water or skim milk, has been one of its most successful initiatives. Guests can choose a wellness meal from the grill or deli bar, and there is a display cooking station during lunch.

“Notable improvements since joining PHA include:

- Wellness meals with sides of fresh fruit and grilled vegetables.
- Pizza Station switched to wheat flatbreads.
- Deli meats freshly roasted in house daily.
- Outtakes to go offering fresh salads, fruits and vegetables, as well as oatmeal parfaits & angel food cake.
- Healthy Food Marketing and Healthy Checkout options available as of September 1, 2013.”

2013 PARTNER STATEMENT

"CHI is proud to be the largest health system to participate in PHA, with 40 of our hospitals committed to the program. The size of our system and the diversity of our hospitals, which range from small critical access hospitals to large urban medical centers, is usually a tremendous asset when sharing and implementing best practices. However, in this first year of our PHA participation, our size and complexity has proven to be a challenge. Our hospitals do not all use the same food program structure or reporting systems. Some of our smallest hospitals do not have cafeterias. With the implementation of a standardized national food program in progress in CHI throughout 2013, which will enhance our capabilities, the 'in progress' status is reflected in our 2013 report to PHA. During the next year, we expect to show much greater program achievements and higher compliance with PHA goals. We look forward to being able to provide a much more accurate reflection of our commitment to the PHA program next year."

profiles. By 2013, 40% of entrees and side dishes should be healthier options, 50% by 2014 and 60% by 2015.

2013 PARTNER STATEMENT

"We are pleased that we are compliant to the 2013 PHA commitments. We have worked very hard to meet the components of the PHA commitment and implemented many changes to our menus and foods we serve. We became sugar-free for soft drinks in January of 2013 and implemented many other changes to foods we serve throughout the year. Our 'mindful' wellness meals have been very well received and are one of our best practices.

"We continue on our journey to making changes for the PHA commitment. During 2014 we will be making additional menu revisions, planning and implementing new cooking procedures and working to affect the Kansas City community at large. We see this challenge as an opportunity to affect not only our patients and employees of the hospitals but the entire population of the community."

“Gundersen Health System proudly teamed up with PHA to deliver healthier options for patients, guests and employees. Gundersen has done an exceptional job at implementing many commitments within the first year. We hosted the first-ever national PHA hospital webinar in August 2013 to discuss our successes. Our baseline data for fruit and vegetable procurement exceeded the 2015 goal with 21% of total food costs. We offer multiple 500 Club® wellness meals for both children and adults in our cafeteria and patient menu. The health-promoting entrees and sides commitment exceeded this year’s goal and indeed exceeded the 2015 goal of 60%.

“Even prior to Gundersen Health System’s commitment to PHA, Gundersen had taken significant steps to promote the health and well-being of patients and employees by:

“Identifying 500 Club® approved items with bright green tabs in vending machines. 500 Club® is a national healthy eating program coordinated by Gundersen registered dietitians and recommended by physicians. Offering lower prices for healthy items in vending machines Removing all deep fat fryers and fried foods Partnering with local food cooperative in an effort to purchase 20% of produce, meat and dairy products locally Selling whole fruits and vegetables for only $0.25 Providing online access to nutrition facts and registered dietitian recommendations for wellness meals”
COMMITMENT

To move healthcare institutions toward delivering nutritious options to meet the needs of children and families they serve, committing hospitals will engage in nine domains of activities:

1. Fruit and Vegetable Procurement-increasing purchasing of fruits and vegetables,
2. Food Marketing-displaying only health-promoting foods in advertising and pictorials,
3. Healthy Checkout-offering only healthier food options near cash register stations,
4. Child Wellness Meals-offering to patients and guests a child wellness meal that meets specific nutrient, food and affordability profiles,
5. Adult Wellness Meals-offering to patients, guests and staff adult wellness meals that meet specific nutrient, food and affordability profiles,
6. Overall Cafeteria/Menu Offerings-increasing the percentage of healthy entrees and side dishes,
7. Nutrition Labeling-labeling all foods with calories per serving,
8. Healthy Beverage Procurement-increasing purchase of healthier beverages and
9. Food Preparation-removing all fryers and deep fat fried products.

2013 PARTNER STATEMENT

"Wellness is a significant part of Henry Ford Health System’s (HFHS) heritage, dating back to the founding of Henry Ford Hospital in 1915. Henry Ford himself prohibited employees from smoking on hospital grounds and emphasized the importance of healthy eating. Over the last century, HFHS’ commitment to wellness has grown and deepened. In 2011, we announced our new vision statement, ‘Transforming lives and communities through health and wellness - one person at a time.’

“In 2012, HFHS made a formal commitment to PHA and First Lady Michelle Obama to transform patient meals and the cafe food served to visitors and employees by 2015. Our bold, progressive accomplishments to date include:

- Removal of all deep-fat fryers (and 7 tons of fat);
- Updating of marketing to exclusively promote healthy choices and ensure only healthy options are near cash registers;
- An improved selection of offerings that move us towards ensuring that the majority of our food choices meet stringent nutrient profiles;
- Offering wellness meals at affordable price-points for children and adults that meet rigorous nutrient and food profiles.

“Through transparency of data reporting we continue to improve on our PHA commitment as lessons-learned are incorporated into planning, development and implementation processes.”

2013 PARTNER STATEMENT

"'Our participation in the Partnership for a Healthier America helps us with all of our Healthy Hospital programs and initiatives,' said Thomas Robinson, MD, MPH, director of the Center for Healthy Weight at Lucile Packard Children's Hospital Stanford. '2013 was very successful' added Robinson, who noted tremendous support from hospital staff, patients, families and visitors to prioritize healthy nutrition, increased physical activity, and general wellness. 'Feedback has been overwhelmingly positive, generating lots of momentum and new ideas. For example, based on staff input we will soon be premiering menus showcasing more plant-based choices and wellness options.'

"Christopher G. Dawes, president and chief executive officer, was also very pleased with the progress in 2013. 'As a children's hospital, the responsibility to set a good example is extremely important,' said Dawes. 'Modeling the healthiest environment possible for our patients, families and community makes all of us very proud, and we thank the Partnership for a Healthier America for their guidance, support and leadership. Together with all the members of PHA, we're thrilled to be having such an impact on hospital wellness and nutrition.'"
COMMITMENT

Move healthcare institutions toward delivering nutritious options to meet the needs of the children, families, and communities Morrison serves by adopting standards for nutrition labeling, food marketing, wellness meal offerings, eliminations of fried foods and increasing healthier beverages and fruits and vegetables offered. Morrison will specifically work to accomplish these goals with the approximately 400 hospital accounts it oversees that use Foodbuy, which makes purchasing programs available for Morrison’s use at accounts where Morrison provides food and nutrition services.

2013 PARTNER STATEMENT

“Morrison is a recognized leader in wellness and last spring, the Healthcare food and nutrition services company elevated its position by committing 352 of its hospital kitchens to PHA’s Hospital Healthy Food initiative. In less than a year, 23 of the 352 Morrison hospitals (6%) have achieved PHA’s Wellness Commitments, while approximately 100 additional Morrison hospital kitchens beyond those already committed are also working towards achieving the same commitments on their own, which speaks to the strength and success of the company’s wellness platform.

“Wellness in Healthcare is evolving and Morrison’s robust platform has grown into its own brand called ‘Mindful Choices.’ Morrison sees its aggressive implementation of its platform across all of its Healthcare business as a competitive advantage. In fact, Morrison clients demand it and our alignment with PHA is one way we continue to grow our long-standing commitment to the health and wellness of our patients, caregivers and guests.

“Morrison also supports the healthy food initiatives and foodservice operations of other hospitals that are independently signed to the PHA Hospital Healthy Food Initiative, including:

- Nemours Children Hospital
- Ann & Robert H. Lurie Children’s Hospital of Chicago
- Jersey Shore University Medical Center”

### 2013 PARTNER STATEMENT

"As an integrated children's health system, Nemours is committed to doing whatever it takes to help children grow up healthy. In 2013, Nemours Associates, patients, families and our food service partners embraced the PHA Healthy Hospital commitment at our two freestanding hospitals in Wilmington, DE and Orlando, FL. This year, Nemours focused on increasing availability of healthier food and beverage options and implementing marketing strategies to make the healthy choice the easy choice, for example, by making fresh fruit available at checkout and offering adult and kids wellness meals. Thanks to the dedication of Sodexo, our partner at Nemours/Alfred I. duPont Hospital for Children in Delaware, Nemours made great progress with nutrition..."
labeling on all menu items both in the café and on the new in-patient menu; an expanded salad bar with nutrition education and labeling of individual components; and the launch of a 'Rethink Your Drink' campaign using 'Go', 'Slow', and 'Whoa' signage to help inform consumer decision-making. Since opening its doors, Nemours Children's Hospital in Orlando, with the support of Morrison Healthcare, has offered innovative and flavorful food items to entice kids with food restrictions to try healthier options. We look forward to continuing this success in 2014."

2013 PARTNER STATEMENT

“PHA has been a great motivator to make changes at our hospital café here at OHSU. Since committing to the project, we have taken down signage displays of sugar-laden desserts, changed the offerings at our cash registers by removing chips and candy bars and replacing them with dried and fresh fruit, dehydrated fruit bars and PHA compliant popcorn chips. We have removed our ice cream fridge, one of our 12 tap soda fountain machines and about 25% of our sugary bottled beverages and replaced the soda machine with a water dispenser. We have switched to zero calorie drinks and are finding many alternatives to sodas that please the taste buds and sell just as well, if not better. We have also started developing our ‘Healthy Team Healthy You’ menu items for adult and children retail meals that are PHA compliant. Overall, the PHA initiative has stimulated some wonderfully healthy changes at our institution.”

2013 PARTNER STATEMENT

"As a member of the Partnership for a Healthier America, the University of Iowa has a focus on providing healthy, accessible, nutrient-rich foods to staff, visitors and their families. Although we had already started to make changes in our food choices, PHA showed us just how much more we could improve in our offerings. From increasing fruit choices and switching to 1% milk to changing how we market our menu items, we have touched every PHA goal to make it better for our customers. We were able to take off ingredients that didn’t fit the guidelines and replace with better quality and higher nutritional ones. We offer daily wellness meals for adults and children and already have our food labeled with calories. We are committed to making these goals and are still working diligently on making more changes for the future."

INCREASING PHYSICAL ACTIVITY
INCREASING PHYSICAL ACTIVITY

Through their commitments to the creation of safe, dedicated places for children to play and increased opportunities for physical activity for kids and adults (The Blue Cross and Blue Shield Association, Reebok); campaigns to promote increased physical activity at schools (NIKE, Inc., Reebok and Kaiser Permanente’s Fire Up Your Feet); access for children to free coaching and fitness resources (NIKE, Inc., and New York Road Runners); installation of kid-sized tennis courts and training of new coaches and teachers across the country (U.S. Tennis Association); and using youth ambassadors to provide nutritional and activity programming for young people (Varsity Brands), PHA partners are getting America’s kids up and moving.

COMPLETED COMMITMENT

In 2013, the Blue Cross and Blue Shield Association fulfilled its commitment by funding the creation of 40+ new Play Streets — roads closed to traffic and open to the community for physical activity — in 10 cities around the country.

Reebok
Reebok will invest $30 million over three years in organizations and initiatives that promote physical activity and fitness

NIKE, Inc. is investing $50 million and resources over five years to address the physical inactivity epidemic in the U.S.

“In September the students in the before-school program were sitting in the cafeteria playing with their iPads or Uno and now, three days a week, they are active for a full hour! Thank you for creating such incredible lesson plans that are highly adaptable and easy to implement and are inclusive of all students and abilities.”

TAMMY SULLIVAN
FORT RIVER ELEMENTARY SCHOOL, AMHERST, MA
PARTICIPANT IN THE REEBOK BOKS PROGRAM

“All kids deserve a chance to realize their full potential and we believe creating active schools will help kids do better in school and most importantly in life.”

MARK PARKER
PRESIDENT & CEO, NIKE, INC.
COMMITMENT

Sponsor the Play Streets program, with funding of $1,000,000, to be operated by PHA. The goal of the program is to improve access to play spaces, particularly in neighborhoods that lack any other sufficient space for activity, by closing designated streets to traffic on a routine basis and opening space in the community to encourage physical activity and community interaction. With the support provided by Blue Cross and Blue Shield Association, PHA will grant funding to ten cities to operate four Play Streets events each.

2013 PARTNER STATEMENT

“The Blue Cross and Blue Shield Association (BCBSA) partnered with PHA to implement the Play Streets program in 10 cities across the country during 2013. Each city hosted at least four Play Streets by closing designated roads to traffic and opening them up to the community as a place to play.

“The ten winning cities received funds, technical assistance, and communications and marketing support from PHA, BCBSA, and the local Blue Cross and Blue Shield companies to create Play Streets events in their communities. The winners were chosen based on their ongoing commitment to increasing physical activity among kids, health education and programming, sustainability of the program, and community development.

“Play Streets is one of many initiatives around the country in which BCBSA and the 37 independent, community-based and locally operated Blue Cross and Blue Shield companies are promoting prevention and wellness. For more than 80 years, the Blues have made a difference in the lives of the communities they serve and are committed to the fight to end childhood obesity. More examples of how the ‘Power of Blue’ is creating healthier communities can be found here: http://www.bcbs.com/about-the-companies/power-of-blue.html."
COMMITMENT

Support Fire Up Your Feet, a youth physical activity program that encourages active transportation to and from school. Kaiser Permanente will make resources, tools and funding available to schools to implement Fire Up Your Feet and provide intensive program implementation assistance to low-income schools. Kaiser will support Let’s Move Active Schools, a collaborative effort to empower school champions to create active environments that engage students in movement every day, by investing in Fire Up Your Feet and investing additional resources in Let’s Move Active Schools partners.

Kaiser Permanente had two grant competitions called Challenge Awards, one in May 2013 and one in November 2013. A total of 212 schools entered in the challenge and tracked activity, logging 4,153,680 minutes of physical activity. Kaiser Permanente provided $41,950 in grant awards to 75 schools (66 unique schools; 9 schools funded twice) serving kindergarten through grade eight students located in 11 states (California, Colorado, District of Columbia, Georgia, Hawaii, Maryland, Minnesota, Ohio, Oregon, Virginia and Washington). Schools received $50 to $5,700 dollars (average award=$559) for activities, equipment, incentives and education to promote physical activity. Kaiser Permanente estimated that 37,583 unique youth were reached through these grants. Twenty-two (33%) of the 66 unique schools that received grants through the competitions had student populations where 50% or greater were eligible for free or reduced-price school meals. There was no intensive support provided to these schools in 2013.

to youth physical activity programs, and provide evidence of this consideration to PHA.

Invest a total of $75,000 in one or both of the LMAS partners. December 2015  December 2013  On March 18, 2013, Kaiser Permanente awarded a $75,000 one-year grant to the SHAPE America (formerly American Alliance for Health, Physical Education, Recreation, and Dance). Key activities for the award include providing recognition for schools that qualify as Let's Move Active Schools. Kaiser Permanente estimated that 300 schools would be reached through these this activity.

2013 PARTNER STATEMENT

"Kaiser Permanente has embraced this commitment to support the creation of opportunities for children to be active before, during, and after school. In 2013, through our support of the Fire Up Your Feet youth physical activity program, participants at 212 schools logged over four million minutes of physical activity and competed to secure grant awards. Seventy-five of those schools were awarded grants totaling more than $40,000. In addition, our support of the Let's Move Active Schools effort enables school champions to be recognized for their efforts to engage students in movement every day.

"We believe that daily physical activity, coupled with good nutrition, provide students with the foundation to learn well in school. In 2013, in addition to the above commitments, we partnered with the Alliance for a Healthier Generation to fund six new program managers to support increased physical activity and improved nutrition environments in schools in Kaiser Permanente’s regions. Other physical activity initiatives supported by Kaiser Permanente in 2013 include safe routes to school, active recess, and the Every Body Walk! collaborative to build a national movement for walking and walkability."
COMMITMENT

Provide $7 million in funding to the Mighty Milers running program to expand the number of schools and students participating in the program. In addition, New York Road Runners (NYRR) will do the following activities to promote running: disseminate and promote digital resources for running; engage schools in National Running Day and promote Let’s Move! Active Schools on its website and in newsletters.

2013 PARTNER STATEMENT

"New York Road Runners is delighted to report significant progress on behalf of our mission: helping and inspiring people through running. In conjunction with PHA, more than 102,000 children from 456 primarily Title 1 schools have run more than 1.35 million miles this school year in our largest program, Mighty Milers. Toward the goal of enabling thousands of schools and millions of children to participate, we recently restructured the free program to reduce barriers to entry. When we pilot the revamped program this spring, we anticipate serving an additional 100+ schools and 20,000+ students.

"We’ve also been preparing Miles for Books, an annual Mighty Milers promotion that links the miles that participants run to earning new books for their school libraries. We expect to award 25,000+ books this spring to over 250 schools. Furthermore, we sent nine lessons to teach running as a mini-unit in K-5 physical education classes to 37,622 P.E. teachers and athletic directors from 36,032 schools, and delivered 16 live, active presentations to educators about teaching running in P.E. this winter. We’re also about to launch our latest Running Start event guide—a step-by-step manual to empower schools to establish a running-based fundraiser instead of selling candy."
COMMITMENT

NIKE will invest $50 million over the next 5 years to address the physical inactivity epidemic by focusing on creating early positive experiences for kids and integrating physical activity into everyday life. The investment will initially be dedicated to three categories of activity: active schools, early positive experiences in youth sports and advocacy and partnerships to accelerate uptake of large-scale solutions. Nike may shift investment strategies to best deliver against the physical inactivity epidemic.

communications support, development of a website portal, training, and events. $2,206,862 was invested in community sports and coaching, and $846,351 was invested in advocacy and partnerships. During this 10 month period, NIKE has made 17% progress towards meeting its 5 year goal.

2013 PARTNER STATEMENT

“Today’s children are the least active in history. The US is facing a physical inactivity epidemic that threatens to drain our national economy and shortchange our children’s future. The financial cost of physical inactivity is estimated at $147B annually, twice the federal education budget. The human cost is unacceptable: this generation of children is the first who may live shorter lives than their parents, and certainly lower quality of life.

“Physical inactivity is a systemic issue, and no one can fix it alone. Nike worked with 70 experts internationally to launch Designed to Move - a simple framework for action supported by public, private and civil sector organizations. It has two simple asks that everyone can act on: 1) Create early positive experiences for children in sports and physical activity to promote a lifelong love of physical activity; 2) Promote ways to integrate physical activity into life to increase everyday incidental movement.”
"In delivering against the shared Designed to Move agenda, Nike focused investments this year in active schools, program innovation to deliver positive experiences for youth in sports, and in collaborative advocacy to elevate national awareness around the key issues and solutions. It is a long-term commitment to better ensure America’s children reach their greatest potential."
Reebok

**COMMITMENT**

Invest $10 million each year for three years in organizations and initiatives that promote physical activity and fitness. Reebok will deliver this investment through direct grant-making to schools and non-profit organizations, product donations, in-kind resource allocation and other direct and indirect investments that have measurable financial value.

approximately 140,000 fitness app users.
With Reebok's broader investment, orient advertising and marketing efforts (including social media) to heighten awareness of the importance of fitness for children, their families and their communities.

December 2015

December 2013

As described above, Reebok has oriented advertising and marketing efforts to support fitness activities for children and their families.

2013 PARTNER STATEMENT

"Reebok believes that the power of fitness can change the world by improving the human condition - that if we get people moving, we can help transform their lives and the lives of those around them. Through the Reebok Social Purpose platform we use philanthropy, strategic partnerships, innovative programs and research to ensure we make the most positive impact on the world.

"BOKS (Build Our Kids' Success), our primary Social Purpose program, is a before school physical activity program founded on the principle Active Kids = Active Minds. Inspired by Dr. John Ratey's book Spark, which states that 'exercise is the single most powerful tool that we have to optimize the function of our brains,' BOKS was created by Kathleen Tullie with a goal to enhance academic performance and the overall health of kids through physical activity. The program, run by moms, dads, P.E. teachers and community volunteers, is in over 800 schools and we expect to be in more than 1,000 by 2015.

"We're extremely proud of how far BOKS has come. We have a bold ambition to reverse the current culture of spectators to a culture of participants and there's no better way than to start with youth."

"In our first year of Cheer for a Healthier America, we were very excited about how much interest we received from across the country during our summer cheerleading camps. We had nearly 900 schools commit to starting a program in their community. As the school season kicked off, we did not get as many schools participating as we had hoped. We had 10 schools fully participate at elementary schools in their community and have numerous schools who are starting programs during the Spring semester! We are still actively contacting all the schools who have pledged with us to try to spark some interest that may have been forgotten."
CERNER
one of the nation’s largest providers of Electronic Health Record (EHR) solutions, is licensed by 45,000 physicians, of which more than 6,000 are family practice physicians. Cerner is also in more than 10,000 facilities globally.

GE HEALTHCARE
has developed Centricity Practice Solution, an electronic medical record for clinical excellence and practice management tool. Centricity Practice Solution is utilized by 35,000 clinicians globally across the clinical spectrum.

PHYSICIAN’S COMPUTER COMPANY
which serves about a thousand providers, has developed a unique EHR service that is designed for pediatrics. It estimates that PCC providers serve in total 300,000 to 400,000 pediatric patients

ENGAGEMENT
ENGAGEMENT
PHA recognizes that solving the childhood obesity crisis cannot be done without the direct engagement of healthcare providers, who have a unique opportunity to educate American families and raise their awareness of what’s at stake. Electronic Health Record providers Cerner, GE Healthcare and the Physicians Computer Company have committed to develop the Healthy Weight Plan to provide doctors with tools to identify, manage and track childhood obesity, and to work with patients and their families to build healthier habits.

COMPLETED COMMITMENT
Over the last two years, The Links Inc. chapters engaged in childhood obesity intervention programs at the local level and served as an on-call monitor to help PHA with local-level verification efforts.

“At Cerner, we really see the value in connecting the right information to the right people at the right time. There is a need to help facilitate dialogue between the physician and care giver in the pediatric space and we’re proud to be able to lend our expertise in this arena.”

DAVID T. NILL, MD
Vice President and Chief Medical Officer, Cerner
COMMITMENT

Produce electronic health record technologies that will help primary health care providers develop healthy weight plans for patients and their families. The plans will give providers the tools to capture relevant data to track at-risk patients; present data to patients and families in a way they can understand and use; generate practical goals for patients and families to pursue between visits and provide information about community resources to help support healthy weight goals. In addition to helping clinicians support children at risk for childhood obesity, the tools also will help them support children who are at a healthy weight to maintain that status and develop the healthy habits that will serve them throughout childhood and adult life.

new template will be created to enable providers to capture goals, barriers and facilitators. The expected release of the template is June of 2014.

Develop and implement Use Case 4: Resource Identification. After identifying goals, barriers, and supports, children and families must identify actionable strategies to achieve their goals. Under this use case the EHR is able to capture and store a tailored set of resources within the clinical care system and the community where the patient resides.

September 2014

December 2013

The ability to add clinical referrals and community resources currently exists in the EHR. Plans are underway to enhance the feature to allow
Develop and implement Use Case 5: Healthy Weight Plan Creation. This process includes the creation of a summary document using the EHR data gathered during the visit. The document, a Healthy Weight Plan, is created before the end of the visit. Included in the Healthy Weight Plan are: 1) summary of current diet and physical activity behaviors (and sedentary behaviors); 2) presentation of goals selected during the visit, along with accompanying barriers and supports; and 3) summary of resources identified to help support these goals.

September 2014

December 2013

The development of the Healthy Weight Plan is in the design phase. The current document used to describe the patient's care plan will incorporate the patient's
diet and physical activity behaviors, goals and barriers selected as well as the resources identified to help support the goals. The Healthy Weight Plan will be designed so it can be printed or sent electronically to the patient.

2013 PARTNER STATEMENT

“Cerner was proud to be announced as participants in the Partnership for a Healthier America in March 2013. Since that time, an internal team has worked to understand our current capabilities in Cerner Millennium, shadowed clients to understand best practice and lessons learned of existing functionality, and devised a
plan to implement required modifications and incorporate the use-cases defined by PHA for EHR companies. We are pleased to report that we have already assimilated 65% of the use-case criteria and are on-track to meet the deadline in 2014."
**COMMITMENT**

Produce electronic health record technologies that will help primary health care providers develop healthy weight plans for patients and their families. The plans will give providers the tools to capture relevant data to track at-risk patients; present data to patients and families in a way they can understand and use; generate practical goals for patients and families to pursue between visits and provide information about community resources to help support healthy weight goals. In addition to helping clinicians support children at risk for childhood obesity, the tools also will help them support children who are at a healthy weight to maintain that status and develop the healthy habits that will serve them throughout childhood and adult life.

SEE PRIOR YEARS' PROGRESS >
Utilize nationwide chapters with active childhood obesity projects and health initiatives, and their key partners, community stakeholders, and affiliate volunteers to assess local alignment with PHA partner commitments. December 2013

The Links and their nationwide chapters of volunteers were available to PHA to assist with the assessment of PHA partner commitments.

2013 PARTNER STATEMENT

"The Links, Incorporated, an organization of African American women who volunteer to serve their community, continued interventions to reduce childhood obesity among children in elementary and middle school with its partners that included the Safeway Foundation, Wells Fargo, the Kellogg Foundation, and the Aetna Foundation. In addition to hands on interventions to improve family nutrition, to reduce hunger, and to increase exercise, the program has produced a Mobile App, 'Food Links' that will soon be available in the Apple Store."
EXPANDING OUR REACH
PHA’S NEWEST PARTNERS

In 2013, PHA continued to garner commitments from a wide range of organizations, extending our reach into doctors’ offices, grocery store produce aisles, cheerleading camps and an ever-growing number of communities, school and hospital cafeteria and physical fitness programs for kids.

Electronic Health Record providers Cerner, GE Healthcare and the Physician’s Computer Company have all committed to developing the Healthy Weight Plan to provide doctors with tools to identify, manage and track childhood obesity, and to work with millions of patients and their families to build healthier habits.

PHA’s Hospital Healthy Food Initiative is helping healthcare facilities across the nation overhaul cafeteria and patient menus to reflect these institutions’ important function as health providers. In 2013, Eskenazi Health, Meridian Health, Morrison Health Food Services, St. Luke’s Hospital and UnityPoint Health-Trinity, with about 400 hospital clients, joined the 150 hospitals and medical centers already committed to reducing calories, removing fryers and adding more fruits and vegetables to the meals they serve.

Over the next five years, Kaiser Permanente will make its ‘Fire Up Your Feet’ program available to elementary and middle schools across the country.

The Mushroom Council will dedicate at least $6 million over three years to product innovation and a fully integrated marketing program that will educate and engage key stakeholders, including school nutrition directors, moms, chain restaurants and others about the nutritional value of adding mushrooms to meals.

New York Road Runners (NYRR) will invest $7 million in its Mighty Milers program over the next five years and distribute its coaching and fitness resources for free, teaching and inspiring more than 500,000 kids to run.

NIKE, Inc. will invest $50 million over the next five years to address the physical inactivity epidemic. NIKE will focus on creating early positive experiences for kids and integrating physical activity into everyday life. Its support will focus on bringing school and youth sport programming, advocacy and partnerships to scale.

Reebok will invest $30 million in organizations and activities that promote physical activity and fitness for kids and adults, dedicating $2 million per year to expanding the BOKS (Build Our Kids Success) program five-fold by 2016.

Sesame Workshop and the Produce Marketing Association (PMA) are teaming up over the next two years to help promote fresh fruit and vegetable consumption to kids. Sesame Workshop has committed to waive its licensing fee and allow PMA’s community of growers, suppliers and retailers to use Sesame Street characters to deliver positive messages about fresh fruits and vegetables royalty-free.

The United States Tennis Association (USTA) joined PHA for the third year in a row. This time, USTA committed to install 5,000 new kid-sized tennis courts and train 15,000 new coaches and teachers over the next three years.

Varsity Brands made a commitment to increase nutritional and activity programming for the 400,000 young people and 26,000 coaches, mentors and advisors that are part of its network of cheerleading camps and competitions.
BUILDING A HEALTHIER FUTURE

PHA’S NATIONAL SUMMIT

Every year, leaders representing the private sector, philanthropic organizations, academia, government and the public health community come together to focus on how their actions can help us to build a healthier future for America.

The 2013 Summit took place over two jam-packed days and dozens of breakout sessions at the Grand Hyatt Washington. We convened the nation’s most enthusiastic and informed stakeholders on this topic, representing a wide range of perspectives, and asked them to focus their creativity, their passion and their resources on how they could collectively lower the staggering obesity rates that afflict our nation’s children.

We heard from PHA Honorary Chair First Lady Michelle Obama, who was introduced by New York Giants quarterback and BOKS Ambassador Eli Manning, our PHA Honorary Co-Chairs Former U.S. Senate Majority Leader William H. Frist, M.D., and then-Newark Mayor Cory Booker, now a U.S. Senator. Cooking Light sponsored an onstage school lunch cooking challenge, supported by the James Beard Foundation. And attendees chose Dennis Ai as Sanofi’s End Childhood Obesity Innovation Challenge winner for designing a game called Easy Eater, which lets kids compete with each other by feeding the foods they eat each day to avatars. The avatars then grow stronger based upon what they’ve consumed.

At the 2013 Summit, we also introduced our first Expo, which provided a marketplace for companies to showcase their own visions for how to make healthier choices easier. Nearly 50 percent of those who attended the Expo visited every booth, giving participants broad exposure for their products and programs.

Last year we generated a new wave of enthusiasm for tackling the daunting, national challenge of reducing childhood obesity. Leading organizations — including Reebok, Morrison Healthcare, Varsity brands, the Mushroom Council and several electronic health records vendors — announced new commitments to fighting this critical national health crisis.

At the 2014 Summit, we’ll learn more about the role that race, ethnicity, geography and poverty play in preventing access to healthy choices and how minority and resource-poor communities are adversely impacted by obesity. We’ll discuss what’s working, and what’s not, in the military, at schools, for advocacy groups and among business collaborators working to address obesity trends. And we will hear about how some colleges and universities are redesigning their environments to make healthy choices simpler and easier for students, faculty and staff. And most important, we’ll learn about how the private sector can help address these challenges.

The PHA Summit represents a powerful opportunity for leaders across the health and wellness space to come together, learn from each other and form new relationships to help advance their work. No one company, advocate, organization or individual can solve this national health crisis. But together, we will. And we are.

“…just think for a minute what this country could look like. Imagine walking into any grocery store in America and finding the healthiest options clearly marked and centrally placed so that you know within seconds what’s good for your family when you walk in that store. Imagine opening up a menu in any restaurant and knowing exactly what items will give your family the most nutrition for your hard-earned dollar. Imagine our kids begging and pleading, throwing tantrums to get you to buy more fruits, vegetables and whole grains… It is possible to create this world!”

First Lady Michelle Obama, 2013 Building a Healthier Future Summit
PROMOTING & BROADENING OUR EFFORTS
PHA COLLABORATIONS

While commitments from the private sector are critical to helping end the childhood obesity crisis, they are not the only tools that PHA employs. Real, sustainable change requires a shift in the way people think about health throughout the day and in every facet of their lives. Whether we’re at home, at work, at school or enjoying leisure time, we are constantly making choices that affect our health and our family’s health. So in addition to securing commitments from the private sector, PHA collaborates with other organizations on initiatives that help change the way Americans think about what they eat and drink, as well as how they live. In 2013, we expanded these efforts to include:

CHOP CHOP
This nonprofit quarterly food magazine for school-age kids and their families is collaborating with PHA to develop and share healthy, tasty recipes to prepare together. These recipes, uniquely designed to develop children’s cooking skills and nutritional literacy, can be found in each issue of ChopChop magazine and online at www.ahealthieramerica.org and www.chopchopmag.org.

DRINK UP
This initiative, launched by PHA and its Honorary Chair First Lady Michelle Obama, brings together every corner of the water community, all committed to encouraging people across the country to drink more water more often. Everyone has a choice when grabbing a drink, and when they choose water they’re doing one of the single best things to stay hydrated, focused and refreshed. Through the end of 2013, commitments were secured to feature the Drink Up logo on thousands of outdoor public water taps, 300 million packs of bottled water, half a billion individual bottles of water, 200,000 packages of reusable bottles and 10,000 individual reusable bottles. Our message: You are what you drink, and when you drink water, you Drink Up!

LET’S MOVE! ACTIVE SCHOOLS
We know that active kids do better — they perform better academically, attend school more regularly and behave better while they’re there. Let’s Move! Active Schools is an outgrowth of First Lady Michelle Obama’s Let’s Move! effort, and is currently at work in over 6,000 schools in the United States, supporting individual champions who are committed to creating an active school environment. Registered schools are eligible for grants to kickstart physical activity programs for kids; receive professional development and technical assistance to get those programs underway; and have access to free online resources and communications tools to help them spread the word and build support for keeping America’s kids moving.

PHA partners with NIKE, Inc., Kaiser Permanente and Reebok, and nine other non-profit organizations, to support this effort to create more active schools across the country.

PLAY STREETS
This initiative closes streets to traffic and opens them up for play, offering that space to communities so families can come outside and run, bike, dance, skate or engage in other fun physical activities. In 2013, the Blue Cross and Blue Shield Association provided PHA funding for 10 selected cities to plan and execute Play Streets events in their communities. Through 40+ events, Play Streets opened more than 42 miles of community space for nearly 72,000 children and adults to engage in more than 192 hours of physical activity.

PLAY STREETS BY THE NUMBERS:

13,000

PINTEREST & MYPLATERECIPES
Parents looking for recipes that make it easier for them to put tasty, healthy meals on the family dinner table can find them on Pinterest, thanks to a collaborative effort by PHA, Let’s Move!, USDA’s MyPlate and the nation’s top recipe creators. Here you’ll find thousands of recipes sorted by food group, preparation style, ease of creation and even a board featuring some of the First Lady’s favorite healthier recipes. Media partners contributing recipes to the boards and helping to promote MyPlate include Epicurious, the Food Network, Hearst Magazines, Meredith Corporation and Time Inc.

CHANNEL ONE
Channel One LLC, the educational, digital content provider and producer of award-winning Channel One News, has teamed up with PHA to promote healthy living to its five million student viewers in upper elementary, middle and high schools across America. Over the next three years, Channel One will use its programming to raise awareness of childhood obesity and create a culture of health in our schools and will provide PHA valuable advertising space to push the same message.

SONGS FOR A HEALTHIER AMERICA
Hip Hop Public Health understands the powerful influence music can have on young people and has joined with PHA to produce and promote an album of multi-genre songs about healthy living that can be downloaded for free. Released in June, with a video featuring a guest rap by Dr. Mehmet Oz, the album includes songs by dozens of popular artists, including Jordin Sparks, Ashanti, Doug E Fresh, DMC, Arte Green, Daisy Grant, the E Street Band’s Nils Lofgren and Ryan Beatty. Through their lyrics, the musicians inspire kids to believe in themselves, be more physically active and make healthier choices throughout their lives.

PHA’s full progress report including partner data is available online at: progressreports.ahealthieramerica.org
THE WORK STILL AHEAD

As we enter 2014, we are proud of what PHA and our partners have accomplished, and the momentum that together we have built. With childhood obesity rates beginning to level off and in some cases decline, while consumer expectations for healthier products rise, it’s clear we are making a difference. But that is precisely why now is the time to step up our game and accelerate our efforts.

Right now we have an opportunity to achieve something truly special: We have the opportunity to win — to put an end to the childhood obesity epidemic, to create a nation that values healthy living and makes healthy choices affordable and accessible and to ensure those choices are available not just to some families, but to all.

But if we rest now, we will surely fail.

Each of us has a meaningful role to play. We must put our minds and our resources together to collaborate on how we can leverage the progress we’ve already achieved to bring us even closer to our goals, and to ensure that these gains don’t slip away, but become a lasting transformation in the way Americans live.

We know that this vision is one that we can achieve. Last year, 16 leading food and beverage companies, which make up the Healthy Weight Commitment Foundation, removed a collective 6.4 trillion unnecessary calories from their products and from consumers’ diets. Meanwhile, Birds Eye demonstrated that selling health could be profitable and that kids would embrace vegetables when properly marketed. With these winning examples, it won’t be long before we see others follow suit.

We need to continue pushing all segments of the market to make healthier options available throughout the day, so that whenever it’s time to eat, fresh fruits and vegetables, water and whole grains are as accessible as anything else. We need to remind kids that being active is fun. We want eating right and staying active to become second nature to American families.

We need to build upon our current initiatives, like making fruits and vegetables more enticing to children by connecting them to Sesame Street characters, so that First Lady Michelle Obama’s vision of children pestering their parents to fill the shopping cart in the produce aisle becomes a reality. We need to identify new ideas, new programs and new campaigns that complement the work already underway. American families must be given a healthy choice wherever and whenever there are choices to make.

As we move forward over the next year, PHA will focus on three main areas of growth:

Continuing to secure commitments from the private sector to provide a wider range of healthy choices in the marketplace;

Continuing to convene those in both the private and public sectors who, though they may have different perspectives, can unite under a common cause; and

Continuing to encourage Americans to make healthier choices when given the opportunity.

We need to make sure that the healthy choice is the easy choice for everyone — regardless of where people live, work or play.

PARTNERSHIP FOR A HEALTHIER AMERICA
PHA FOUNDERS

ALLIANCE FOR A HEALTHIER GENERATION
The Alliance for a Healthier Generation, founded by the American Heart Association and the Clinton Foundation, works to reduce the prevalence of childhood obesity and to empower kids to develop lifelong, healthy habits. The Alliance works with schools, companies, community organizations, healthcare professionals and families to transform the conditions and systems that lead to healthier children. To learn more and join the movement, visit www.HealthierGeneration.org.

THE CALIFORNIA ENDOWMENT
The California Endowment, a private, statewide health foundation, was established in 1996 to expand access to affordable, quality health care for underserved individuals and communities and to promote fundamental improvements in the health status of all Californians. Headquartered in downtown Los Angeles, The Endowment has regional offices in Sacramento, Oakland, Fresno and San Diego, with program staff working throughout the state. The Endowment challenges the conventional wisdom that medical settings and individual choices are solely responsible for people’s health. The Endowment believes that health happens in neighborhoods, schools and with prevention. For more information, visit www.calendow.org.

KAISER PERMANENTE
Kaiser Permanente is committed to helping shape the future of health care and improving the health of the communities it serves. It is recognized as one of America’s leading health care providers and not-for-profit health plans. Through its Community Health Initiatives and Thriving Schools efforts, Kaiser supports community-based prevention strategies that increase access to healthy food and opportunities for physical activity in schools, neighborhoods and workplaces. These initiatives complement the organization’s focus and leadership in the area of clinical prevention and Total Health. For more information, visit www.kp.org/communitybenefit.

NEMOURS
Nemours is one of the nation’s largest children’s health systems, with clinical operations in four states as well as community-based prevention, research, education, and advocacy programs. Nationally, Nemours’ goals are to promote programs and strategies, shape policy and contribute knowledge that will improve child health outcomes. Nemours joins the Let’s Move! campaign and other national organizations in advancing an agenda to prevent childhood obesity. In partnership with the Let’s Move! Child Care program, Nemours created and hosts a website (www.HealthyKidsHealthyFuture.org) that advocates a five-step commitment by childcare providers to improve the health environment of facilities. For more information, visit www.Nemours.org.

ROBERT WOOD JOHNSON FOUNDATION
The Robert Wood Johnson Foundation focuses on the pressing health and health care issues facing our country. As the nation’s largest philanthropy devoted exclusively to health and health care, RWJF works with a diverse group of organizations and individuals to identify solutions and achieve comprehensive, measurable and timely change. In 2007, RWJF committed $500 million toward its goal of reversing the childhood obesity epidemic by 2015. For more information, visit www.rwjf.org.

W.K. KELLOGG FOUNDATION
The W.K. Kellogg Foundation (WKKF), founded in 1930 by breakfast cereal pioneer Will Keith Kellogg, is among the largest philanthropic foundations in the United States. Based in Battle Creek, Mich., WKKF engages with communities in priority places across the country and internationally to create conditions that propel vulnerable children to realize their full potential in school, work and life. For more information, visit www.wkkf.org.

STATEMENT OF FINANCIAL POSITION
The Partnership for a Healthier America is devoted to working with the private sector to ensure the health of our nation’s youth by solving the childhood obesity crisis. PHA changed its fiscal year to end on June 30th and the change was effective with the half year ended June 30, 2013. Below is the activity for the most recent full year ended December 31, 2012 and half year ended June 30, 2013.

- PHA’s expenses are concentrated in programs, including the Summit. Only 13% of PHA’s expenses are dedicated to the administrative functions.
- The Statement of Financial Position demonstrates PHA’s strong resources held mostly as cash and some receivables. Most of these assets are restricted for future program use.
- PHA’s activities for the half year show the organization’s continued growth, as compared to twelve months of activities as of December 31, 2012.
